02

INTRO

WHAT IS IT?

The application helps users plan trips between cities based on available transportation options.

WHY ?

To provide an interactive experience using a graphical interface.

03 GOALS & OUTCOMES

GOAL

Finding all possible routes between two cities based on available transportation options.

OUTCOME

Displaying all possible routes or a message indicating that access is not possible.

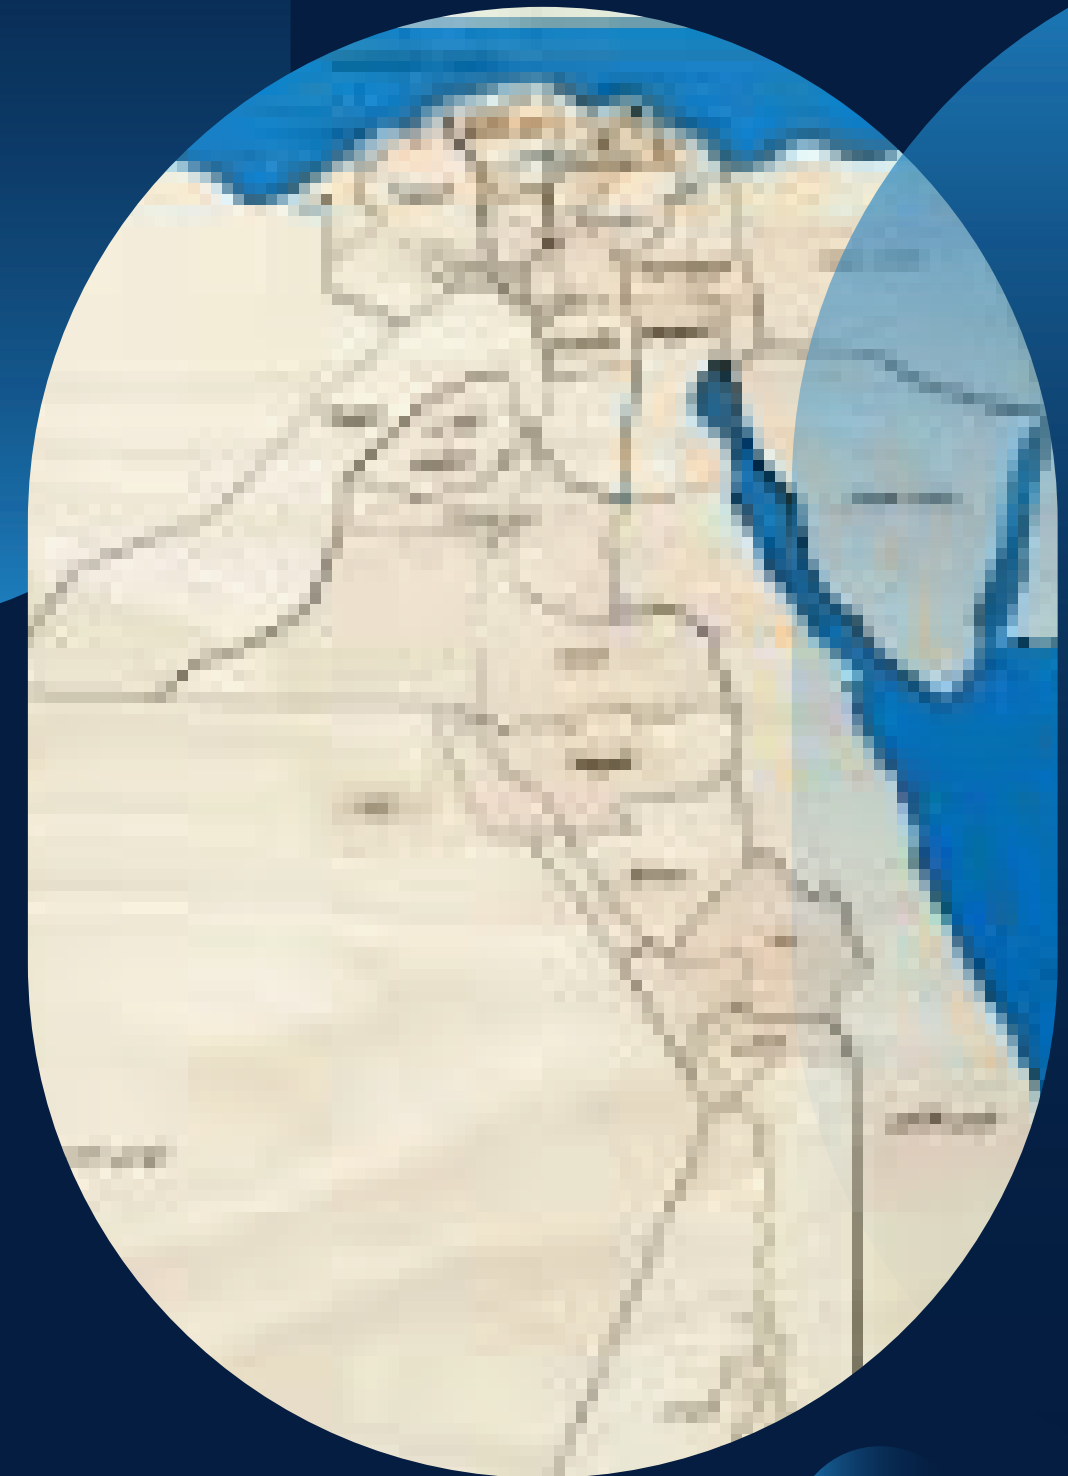

04 MAIN COMPONENTS

01 DATA

- **Cities** : Cairo, Alexandria, Aswan, Luxor, Hurghada, Tanta, Sharm_El_Sheikh, Sohag, Port_Said, Ismaileya.
- **Transports** : Plane , Train, Car

02 RULES

- **transport**: Defines the mode of transportation and the starting and ending points.
- **route**: Searches for routes between cities.
- **find_all_routes**: Displays all possible routes.

05 STEPS OF OPERATION

01

USER INPUT

Select the starting city and the destination city.

02

SEARCH FOR ROUTES

Use Prolog rules to find all possible routes.

03

DISPLAY RESULTS

Format the routes in a clear and easy-to-read manner.

06 STATISTICS

50%

CARS
The most commonly used modes of transportation.

50%

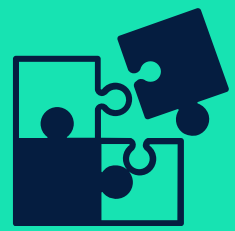

PLANE&TRAIN
The least commonly used modes of transportation.

07

DESCRIPTION

The project is about using Prolog language to plan a trip between specific cities such as Cairo, Alexandria, Aswan, and Hurghada using available modes of transportation like trains, planes, and cars. The program uses a database and specific rules to reach the designated city either directly or indirectly through recursion. It can utilize one or multiple modes of transportation and tries to find a way to reach the target city. The program will print the route from one city to another using one or more modes of transport. If it finds another route, it will print it, and if no route is available, it will print a message stating that it cannot reach the destination.

EXAMPLES

▶ CAIRO

to ALEX by Train
to LUXOR by Car
to ASWAN by Car

▶ ALEXANDRIA

to TANTA by Plane
to ISMAILEYA by Car

▶ SHARM_EL_SHEIKH

to ISMAILEYA by Car

▶ ASWAN

to HURGHADA by Plane

▶ PORT-SAID

to ALEX by Car

THANK YOU
